

Titanium Banjo Bolts

All of ours Banjo Bolts are machined with [6AL-4V \(GR5\) Titanium](#).

The size is M10x1.0, which is approximately 40-45% lighter than steel.

This [Banjo Bolt](#) design is pre-drilled on all the flats to allow for ease of lock wiring. We also accept customized, PDF or AutoCAD drawing accept. Most of these Banjo Bolts are M10x1.0 and M10x1.25 thread pitch.

We (Ti-screws.com) recommend these are fitted dry to avoid brake fluid contamination. They are also supplied with titanium washers.

Sold here individually but also available in packs.
